

RAPID SCALE MBR ANALYSIS

# Customer Sign-Up Behaviour & Data Quality Audit

Transforming customer sign-up anomalies into actionable growth and product onboarding strategies.

---

PREPARED BY

ROLE  
**Business Intelligence Analyst**

PROGRAMME  
**Gradence Data Analysis Internship**

# | Raw Data & Cleaning Methodology

## Database Auditing & Rules

An audit of 300 initial client registrations identified systematic database anomalies. Standard cleaning criteria were established to maintain long-term integrity:

- **Date Synchronization:** Converted diverse formats (e.g. 02-01-24) into standard datetime.
- **Duplicate Elimination:** Safely removed identical Customer ID records.
- **Text Standardisation:** Mapped varying inputs like PREMIUM and prem to Premium.

## Demographics & Imputation

Handling missing parameters effectively to prevent analytical distortions and protect report accuracy:

- **Outlier Handling:** Filtered and marked impossible inputs (e.g. Age: 206) as blank.
- **Demographic Correction:** Stripped invalid text string variations inside Gender rows.
- **Median Imputation:** Substituted missing ages with the median dataset cohort age (34.0 years).

# Data Quality Audit Summary

| Metric               | Raw Dataset Status | Post-Cleaning Action & Final Status                   | Risk Assessment |
|----------------------|--------------------|-------------------------------------------------------|-----------------|
| Total Records        | 300 Rows           | 299 Rows (1 duplicate entry successfully purged)      | CLEANED         |
| Missing Emails       | 34 (11.33%)        | Retained as Null (Escalated to Frontend/System Check) | HIGH RISK       |
| Incomplete Regions   | 30 (10.00%)        | Assigned standard value "Unknown"                     | MEDIUM RISK     |
| Missing/Invalid Ages | 13 (4.33%)         | Substituted using cohort median age (34.0)            | MITIGATED       |
| Mangled Plan Names   | 6 (2.00%)          | Standardized to Basic, Pro, or Premium                | CLEANED         |
| Invalid Genders      | 6 (2.00%)          | Standardized to Male, Female, Non-Binary, or Other    | CLEANED         |

# Weekly Acquisition Trends

*Weekly monitoring reveals a stable, consistent baseline performance hovering between 6 to 8 conversions weekly, signaling sustained organic traction.*

# Marketing Channels Overview

*YouTube dominates top-of-funnel conversion. Organic Search represents our second pillar, with direct social platforms exhibiting highly competitive, neck-and-neck engagement rates.*

# | Regional Performance & Data Gaps

## North Core

Leads customer acquisition volume with **65 verified sign-ups**. High retention metrics point to robust local regional brand trust.

## East & South

Maintain balanced growth tracks at **61 and 59 users** respectively, showing a strong appetite for digital subscription plans.

## The "Unknown" Risk

At **30 users (10.0%)**, missing geography represents a significant tracking blind spot. Immediate form enhancements are required to recover ROI clarity.

# | Subscription Plan Breakdown

- Premium Core Package (99 Active Users / 33.1%)
- Pro Tier Package (94 Active Users / 31.4%)
- Basic Tier Package (92 Active Users / 30.8%)
- Unknown Plan / Missing Registrations (14 Users / 4.7%)

*Plan distribution is remarkably balanced across paid tiers, indicating successful market pricing structures, though the 14 undefined accounts must be audited to prevent revenue loss.*

# | Marketing Engagement & Cohorts

44.1%

Consent & Opt-In Rate

## Target Cohort Demographics

Of 299 users, 132 opted in to marketing communications. Crucial gender engagement distribution trends include:

### Female Cohort

44 Yes / 48 No (~47.8%)

### Male Cohort

38 Yes / 53 No (~41.7%)

### Non-Binary Cohort

19 Yes / 23 No (~45.2%)

### Other Cohort

24 Yes / 35 No (~40.7%)

# | Critical Executive Questions Answered

## 1. Top Acquisition Channel?

---

**YouTube:** The highest-converting partner with 58 verified user sign-ups. Double budget placement in Q3 here.

## 2. Geography Gaps Located?

---

Central (39) and West (45) are low, but the critical risk resides in the **"Unknown" category (30 cases)**.

## 3. Marketing Age Sensitivity?

---

Older users (45+) are less responsive to marketing. The sweet spot for high-tier opt-in rates is the **31–45 age cohort**.

## 4. High-value Segment Preference?

---

Our top tier **Premium plan (99 users)** is preferred strongly by the highly active 31–45 demographic block.

# The Support Ticket Friction Point

## 🔊 Pro Tier Onboarding Bottleneck

By executing an inner database join with support ticket logs, we uncovered a significant challenge:

- **Ticket Volume Peak:** "Pro" tier subscribers generated the highest density of support issues.
- **Contact Rate:** The segment showed a massive **25.53% onboarding contact rate**.
- **Friction Window:** Most tickets were logged within 14 days of checkout, pointing directly to configuration UX difficulty.

# | Strategic Action Items

## 1. Reallocate Ad Spend

Funnel secondary social network ad budgets into YouTube video marketing, capitalising on our lowest CPA channel.

## 2. Revamp Pro UX

Deploy a proactive interactive in-app guide inside the dashboard for "Pro" users to collapse support ticket volume below 10%.

## 3. Upsell Sweetspot

Construct high-tier targeted marketing cohorts for professionals aged 31–45 to drive maximum lifecycle ROI.

# | Data Governance & Risks

-  **Frontend Validation Constraints:** Implement rigid check boundaries on registration fields. Set client age ranges strictly between 18 and 100.
-  **Standardized Selector Fields:** Eliminate raw open text entry for gender and region, shifting variables into robust dropdown lists.
-  **Mandatory Schema Requirements:** Mark essential variables like geographic area as non-nullable within database tables during account setup.
-  **Weekly Audit Routines:** Execute automated SQL check scripts to identify and clean regional gaps before compiling Monthly Business Reviews.
